HEIRSTONE CONSULTING

MARINAS AND YACHT WATERFRONTS

The berth is not the business

Superyachts, marinas and the economics of the yacht waterfront, with a view from the Gulf, the Red Sea and Egypt

THE REPORT IN SIX NUMBERS

6,022 superyachts of 30m or more in service at the end of 2024, up from 917 in 1987

26 yachts of 100m or more in build or on order, against 68 in service (January 2026)

€9m economic activity generated by each superyacht a year; berthing is about 6 to 9% of a 50m yacht's running costs

19.5x Blackstone's price for Safe Harbor Marinas in 2025 as a multiple of marina net operating income

+92% Dubai Harbour resale prices over Dubai Marina in 2025; Dubai Marina itself sat 29% below Downtown

<30 min yacht permit processing in Egypt through the digital window introduced in July 2023, down from 30 days

ABOUT THIS REPORT

Heirstone Consulting advises developers, sovereign and private investors and governments across the Middle East and Africa on waterfront, tourism and specialised real estate. This report draws on public sources current in 2026: operator and developer disclosures, government statistics, listed-company filings, industry surveys and published research. Every figure is referenced in the exhibit sources and in the notes at the end.

Where we have combined published figures to produce a new one, such as revenue per berth or value per marina, the calculation is shown and labelled as Heirstone analysis.

WHAT WE FOUND

Most marina business plans start with the berth. The evidence says that is the wrong place to start.

Berthing is one of the smaller lines in a yacht's running costs and, in the Gulf and the Red Sea, the part of a marina that has already been built. The value lies in the few berths that can take the largest yachts, in the work those yachts need, and in the land around the water.

1 The shortage is in large berths, in particular places and seasons.

The 30m+ fleet has grown at about 4% a year over the past decade. The order book is tilted to size: yachts of 76m and over on order are equal to about 42% of the 80m+ fleet in 2022. The scarcity is in deep water for 60m-plus yachts, in the right sea at the right time of year, rather than in berths generally.

2 The berth owner earns a thin slice of what a yacht spends.

Each superyacht generates about €9m of economic activity a year, yet berthing is roughly 6 to 9% of a 50m yacht's running costs. In New Zealand, 90% of what visiting superyachts spent in 2023/24 went to the marine industry, mostly refit and services. A marina without a yard sends most of the money elsewhere.

3 Marinas now trade as infrastructure.

Blackstone paid US$5.65bn for Safe Harbor Marinas in 2025, about 19.5 times net operating income and twice the value per marina paid five years earlier. In July 2026 CVC agreed to sell D-Marin to InfraVia at a reported 15 times EBITDA. A well-run marina platform is now a saleable asset in its own right.

4 In Dubai, the marina premium sits on the new deep-water frontline.

Four mature marina districts we compared trade below their city's best address: Dubai Marina 29% below Downtown, Porto Arabia 15% below Qanat Quartier, La Condamine 9.5% below the Monaco average and Puerto Banús 3% below Marbella. Dubai Harbour, newer, deep-water and paired with beach and hotels, resold 92% above Dubai Marina in 2025.

5 The region has built the hardware ahead of the ecosystem.

Yas Marina takes yachts of 175m, Dubai Harbour 160m and Marassi 155m, comparable with Port Vauban's 165m. Saudi Arabia, Egypt and Bahrain have rewritten their yacht rules since 2023. Yet Gulf Craft's new Ajman centre handles yachts only up to 60m, Gulf superyacht tariffs are not published, and 129 superyachts visited the Gulf in 2022, fewer than St Barts held on New Year's Eve 2025.

WHAT IT MEANS

Governments should measure a marina by the refit, crew, provisioning and events business it brings in; the berth count says little.

Master developers should put the most valuable plots on the deep-water edge and sell time on large berths, not just nights.

Investors should treat the operating company as a future exit and structure it to be sold from day one.

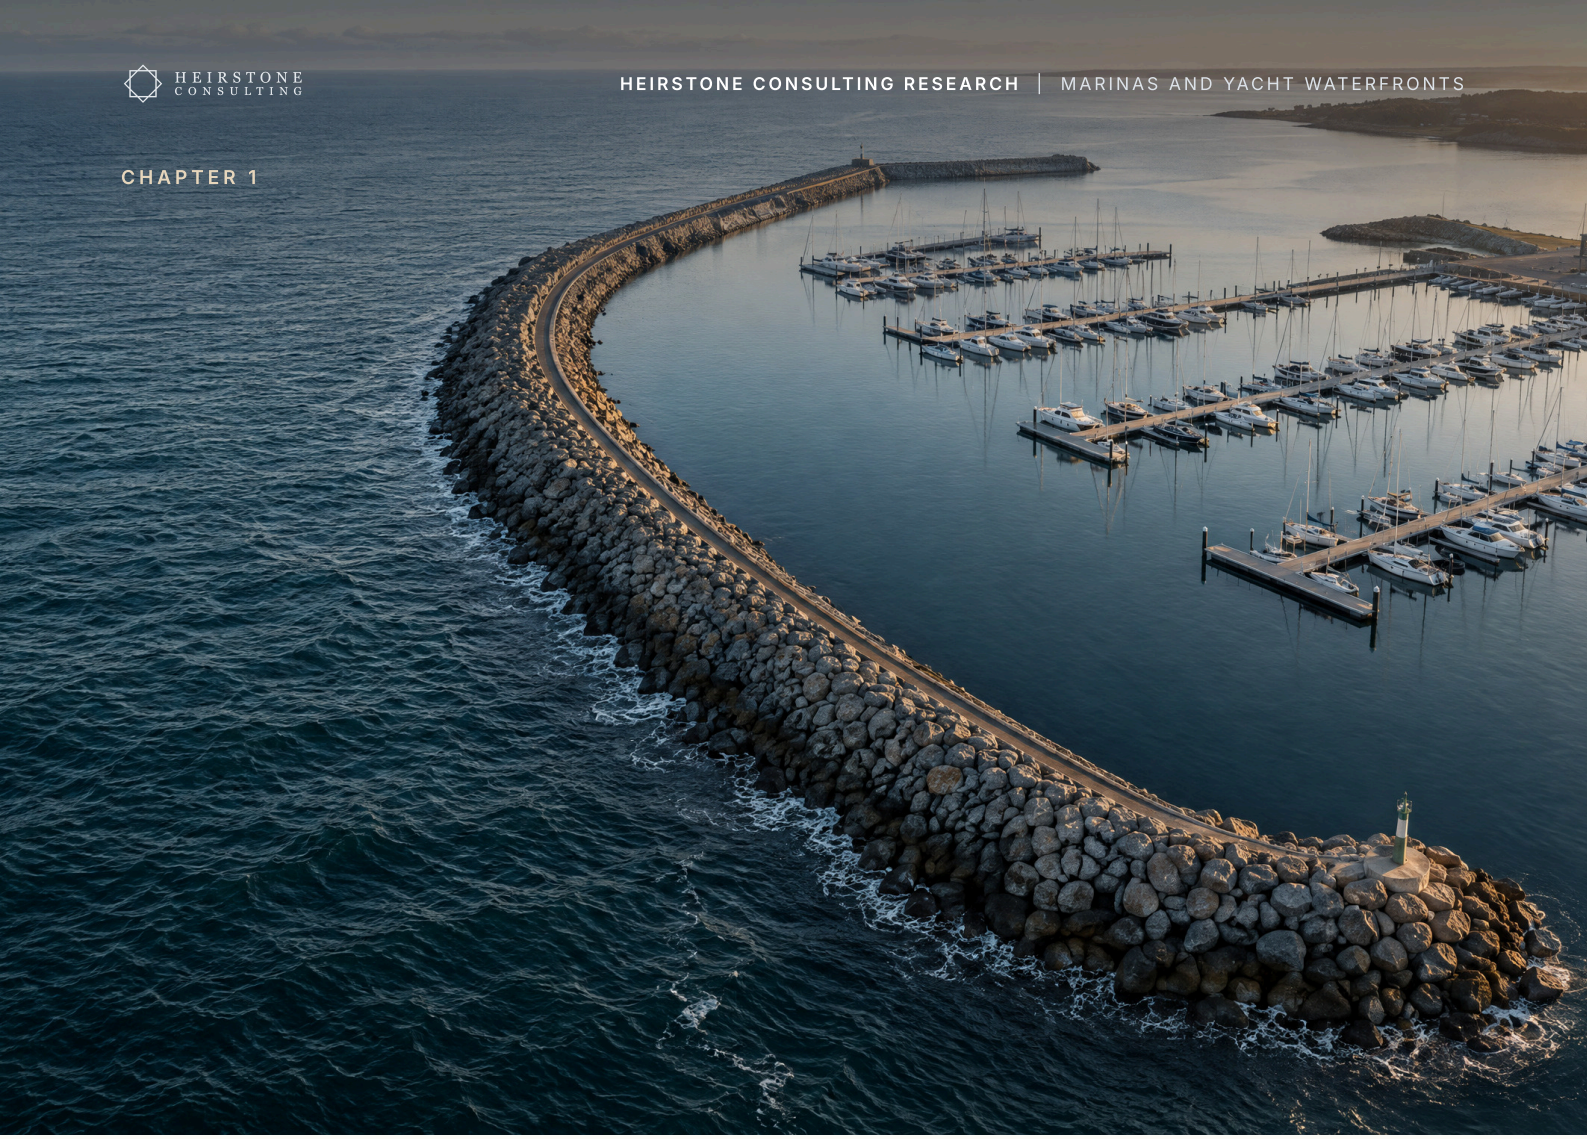

37

marinas in the Heirstone benchmark, 26 of them in the Middle East and Africa

3

countries that have rewritten their yacht rules since 2023: Saudi Arabia, Egypt and Bahrain

CHAPTER 1

01

Bigger yachts, the same harbours

A 100m yacht needs depth alongside, a long quay, power and water at industrial scale and space to manoeuvre. Few harbours offer all of it.

The superyacht fleet has grown without a break for almost four decades. SuperYacht Times counted 917 yachts of 30 metres or more in 1987 and 6,022 at the end of 2024. Deliveries in 2024 reached 228, the most since 2008. Wealth has grown faster: Knight Frank's count of people worth US$30m or more rose 29% between 2021 and 2026, to 713,626.

For anyone planning a marina, the headline fleet number is the least useful of these. What matters is the length of the yachts arriving. Boat International's 2026 Global Order Book lists 67 projects of 76 metres or more, against 18 in 2006; 26 of them are over 100 metres. Only 68 yachts of 100 metres or more were in service in January 2026.

A 40m yacht can berth in hundreds of Mediterranean harbours. A 100m yacht has a short list, and that is where berths are scarce and marinas can set prices.

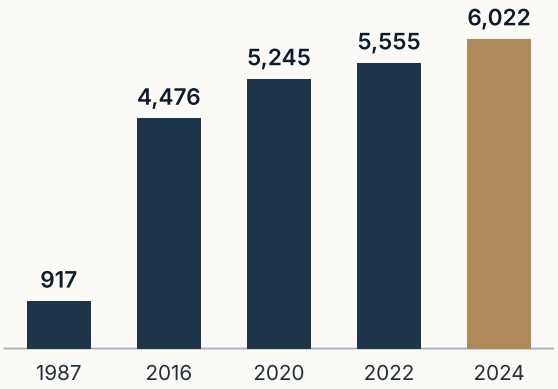

THE FLEET

The fleet grows about 4% a year. The order book is heavily weighted to the largest yachts.

EXHIBIT 1

The 30m+ fleet has grown more than six-fold since 1987

Superyachts of 30m or more in service, selected years

Source: SuperYacht Times, State of Yachting reports (2021, 2025) as reported; Türk Loydu (SYT data, 2023); Boat Industry (2016).

Between 2016 and 2024 the fleet of yachts over 30 metres grew from about 4,500 to just over 6,000, an annual rate of about 4%. That is steady rather than spectacular, and on its own it would not justify the marina building now under way around the Gulf and the Red Sea.

The case rests on size. Exhibit 2 sets the order book against the fleet already in the water. Across all yachts of 30 metres or more, the order book is equal to about 11% of the fleet. For yachts of 100 metres or more, it is 38%. Yachts of 76 metres and over on order are equal to about 42% of the 80m+ fleet.

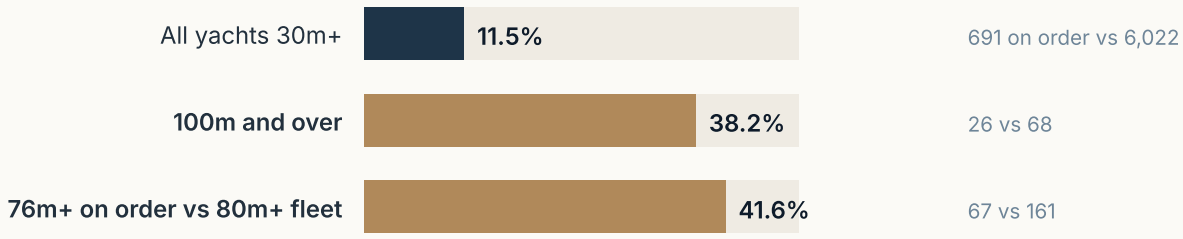

The pipeline also carries less speculation than it used to. In the 2026 survey, 31.8% of the order book was being built on spec, against a pre-pandemic norm of around 40 to 45%. More of these hulls already have owners, and those owners will need somewhere to keep them.

> *For yachts of 100 metres or more, the order book equals more than a third of the fleet in service.*

EXHIBIT 2

The pipeline is concentrated at the top of the size range

Yachts on order or in build as a share of yachts in service, by size band

Source: Boat International, Global Order Book 2026; SuperYacht Times, State of Yachting 2025; YachtBuyer (Jan 2026); Türk Loydu (SYT fleet data, 2022). **Heirstone analysis.** Size bands differ slightly between order book (76m+) and fleet (80m+) data.

WHERE THE FLEET GOES

The squeeze is local and seasonal: summer in the western Mediterranean, winter in the Caribbean

About three quarters of the active fleet spends the summer in the Mediterranean, and the broker IYC puts the Mediterranean's share of 2025 summer charters at 96%. In 2017 Superyacht Intelligence counted 3,287 Mediterranean berths for yachts of 30 metres or more against 3,796 yachts in peak season. The western Mediterranean held about 1,350 active yachts of that size in 2022 and is projected to hold about 1,700 by 2030. IGY reports that key facilities around Porto Cervo and the US Virgin Islands commonly run short of berths for 50m+ yachts in high season.

Winter is a different market. The Caribbean and the Bahamas take 70 to 80% of winter charter bookings. On New Year's Eve 2025, St Barts held 226 superyachts, 13 of them over 100 metres. That is the slot the Gulf and the Red Sea are competing for, and the gap is wide: SuperYacht Times counted 129 superyachts visiting the whole Gulf in 2022.

Nor is there a shortage of owners in the region. Middle Eastern owners had the largest yachts of any region, averaging 63 metres, in a 2019 count. Knight Frank expects the number of Middle Eastern individuals worth US$30m or more to grow 32% by 2031, and the number in Saudi Arabia by 63%. Whether those owners keep their yachts in the region in winter depends on what the coast offers besides a berth: refit, provisioning, cruising grounds, events, and rules that make it easy to arrive.

75%

of the active fleet spends the summer in the Mediterranean (2016/17)

3,287

CHAPTER 2

02

The Heirstone Marina Benchmark

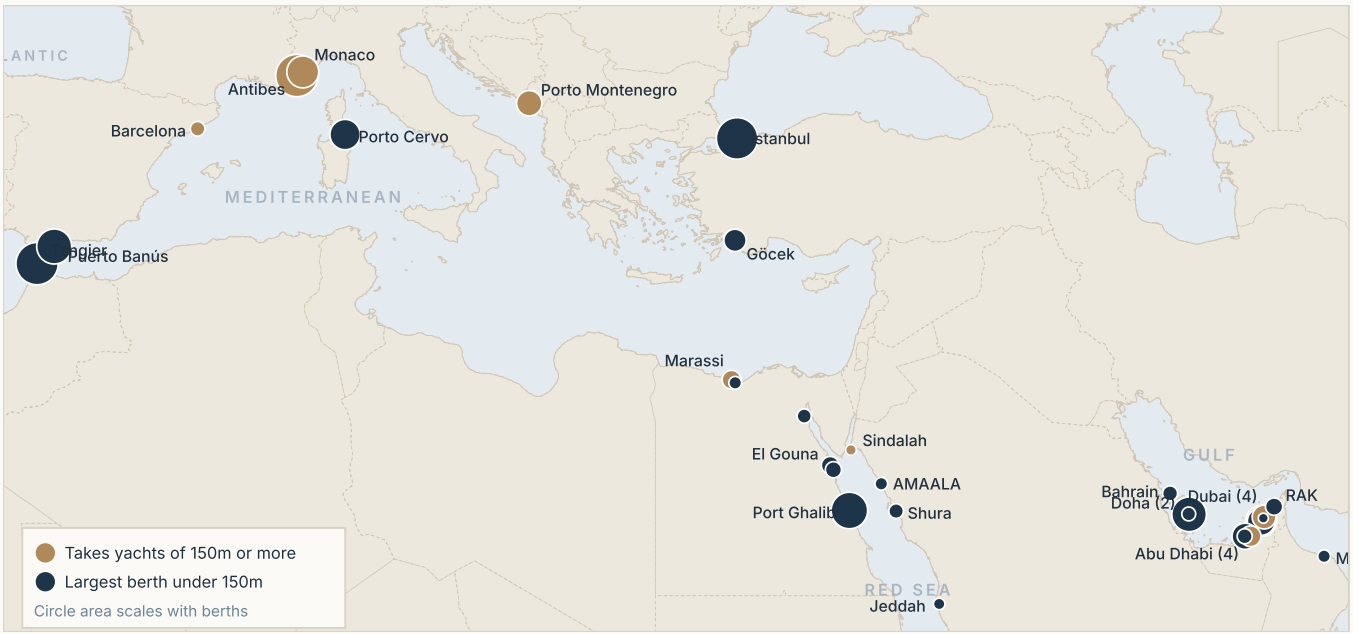

We assembled public data on 37 marinas: eleven international reference points in Europe, Türkiye, Asia and the Caribbean, and twenty-six in the Middle East, North Africa and South Africa. For each we record berths, the largest yacht it can take, opening year, owner and operator, accreditation, the real estate around the water and, where published, price.

Berth counts often disagree between operators, accreditation bodies and directories, by 30 to 60% in several Gulf cases. Where they conflict we show the operator's figure and note the alternative. That inconsistency is itself a finding: the region's marina market is not yet transparent.

EXHIBIT 4

Benchmark marinas from Tangier to Muscat

Benchmark marinas in the Mediterranean, Red Sea and Gulf (Cape Town, Singapore and the Caribbean references not shown)

Source: Heirstone Marina Benchmark 2026, compiled from operator websites, TYHA, Dockwalk Superports, PredictWind and press (details on pages 8 and 9). Positions from Dockwalk and PredictWind, checked against GeoNames. Numbers in brackets are marinas plotted in each city. Positions of planned or recently opened Saudi marinas are approximate.

THE BENCHMARK

Thirty-seven marinas, one table

Berths as published by the operator; figures in brackets are alternatives from other sources. Max LOA is the longest yacht the marina states it can berth. n/p: not published. u/c: under construction. TYHA: The Yacht Harbour Association rating (Platinum = Five Gold Anchor Platinum).

READING THE BENCHMARK

Four things the table shows

The table is a starting point for any feasibility study on a new marina in the region: it shows what already exists within a few days' cruise, what it can take and who runs it.

Largest yacht: the region has caught up.

Five Gulf and Egyptian marinas state they can berth yachts of 140m or more. On the largest yacht it can take, the region is no longer behind the Mediterranean.

Marina size: the Saudi flagships are far smaller.

The nine Mediterranean and Turkish references average about 770 berths; Saudi Arabia's four Red Sea flagships average 116.

Accreditation: spreading, with Platinum still rare.

Yas Marina holds TYHA Platinum, and Dubai Harbour, Jeddah Yacht Club and Al Mouj hold Five Gold Anchors. Platinum is rare: only four marinas worldwide held it in 2019.

Pricing and data: still opaque.

Dubai Harbour, Yas, Mina Rashid and Jeddah are each listed with different berth counts by different sources, and we could find no current published superyacht tariff for any of the Gulf marinas. Egypt's national docking fees, set in 2022, are the exception.

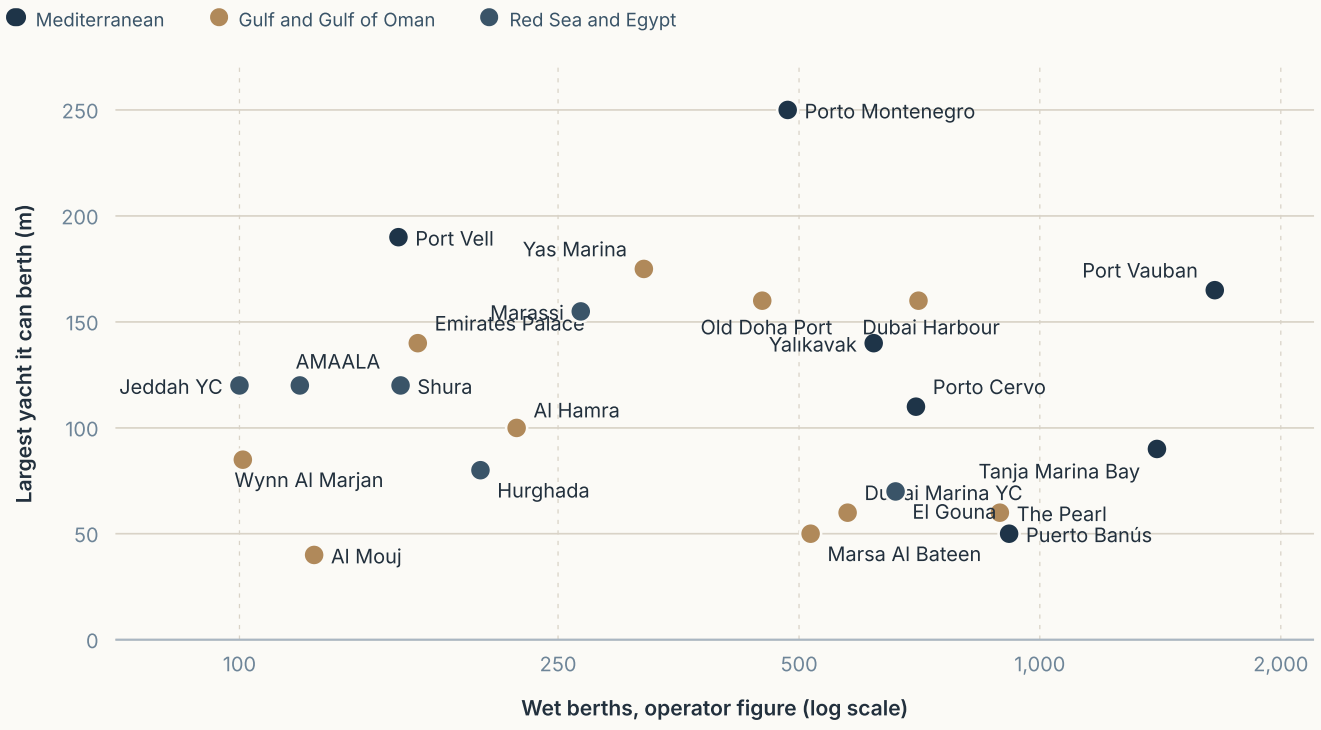

CAPABILITY AND CAPACITY

The Gulf already takes yachts as large as the Riviera does. Its marinas are smaller, and the Saudi ones much smaller.

EXHIBIT 5

Size against capability: the largest yacht each marina can take

Benchmark marinas with published figures; operator berth counts

Source: Heirstone Marina Benchmark 2026. Marinas without a published maximum length (including Port Hercule and Mina Rashid) and Sindalah (berths to 50m, buoys to 180m) not plotted.

Two things stand out. First, the region has caught up with the Mediterranean on the largest yacht it can berth. Yas Marina (175m), Dubai Harbour (160m), Old Doha Port (160m) and Marassi on Egypt's North Coast (155m) sit alongside Port Vauban (165m) and Port Vell (190m). Breakwaters and quay length no longer separate the regions.

Second, the Saudi Red Sea marinas are small by design. Jeddah Yacht Club, Sindalah, AMAALA and Shura offer about 464 berths between them, roughly half of Puerto Banús alone. They are built to serve their resorts rather than a wider berthing market.

A marina that can take one very large yacht may have room for only a handful. Antibes' IYCA quay has 20 berths for yachts over 80 metres within a port of 1,654. Mina Rashid lists seven alongside berths over 80 metres. In both places pricing power sits with those few large berths.

464

berths across Saudi Arabia's four flagship Red Sea marinas, against 915 at Puerto Banús

20

berths for yachts over 80m on the IYCA quay, in a port of 1,654 berths

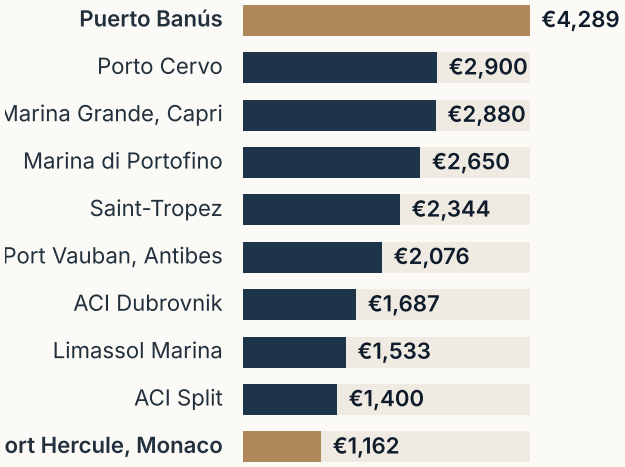

PRICE

The Mediterranean publishes its prices. In the region, Egypt has set a national tariff.

EXHIBIT 6

Puerto Banús tops the nightly ranking; Monaco comes tenth

High-season daily rate for a 55m yacht, 2024

Source: Engel & Völkers Yachting ranking 2024, as reported by The Olive Press (1 July 2024).

Price discovery is the clearest gap between the two regions. Engel & Völkers publishes a high-season ranking for a 55m yacht across Mediterranean marinas. We could not find a current published superyacht tariff for any Gulf marina in our benchmark; the most recent public Gulf rate we could trace dates from 2010. Egypt is the exception we found: in 2022 it set national docking fees of US$4 to 14 per metre a day, depending on yacht length.

Monaco ranked only tenth, at €1,162 a day for a 55m yacht, about a quarter of Puerto Banús. Port Hercule charges for moments instead: in 2024 a 97m yacht paid €129,990 for Grand Prix week, about €18,600 a day against a high-season rate of €2,876 a day for a yacht of 100 to 110 metres (Exhibit 7).

Marinas also sell berths by the year. Long leases on large berths trade through brokers (Exhibit 7). An 80m berth on Antibes' IYCA quay is offered at €3.5m for five years, about €1,900 a day. A 55m berth in Porto Montenegro is offered at €1.69m for fifteen years, about €310 a day. The two differ in size, term and location, but both show owners paying up front for certainty of a berth.

> *We could not find a current published superyacht tariff for any Gulf marina in our benchmark.*

EXHIBIT 7

Buying time: long-lease berth rights versus transient rates

Asking prices of berths offered on long leases, and Monaco transient rates for comparison

BERTH	TERMS (ASKING)	PER YEAR	PER DAY
IYCA, Antibes, 80m	€3.5m, 5-year lease	€700k	€1,918
Cala del Forte, Ventimiglia, 60m	€5.13m ex VAT, 40 years	€128k	€351
Porto Montenegro, 55m	€1.69m, 15-year lease	€113k	€309
Port Hercule, 100-110m	Transient, high season	n/a	€2,876
Port Hercule, 97m, F1 week	€129,990 for the week	n/a	€18,570

Source: Burgess berth listings (IYCA A13; Porto Montenegro R19), viewed 2026; Eurocape/Yacht-Zoo listing (Cala del Forte); BOOTE magazine (28 May 2024). Per-year and per-day figures are **Heirstone analysis**, dividing asking price by lease term; asking prices are not transaction prices.

CHAPTER 3

03

Follow the yacht's money

A superyacht is a small, mobile company with a payroll. Most of what it spends goes to people, parts and work. Very little goes to the marina.

Deloitte and the Vrije Universiteit Amsterdam, in a study for the superyacht builders' association SYBAss, put the economic activity generated by each yacht in the active fleet at about €9m a year, and the industry's total economic output at €54bn, based on 2022 activity. Crew take 37% of a yacht's operating spend, maintenance 20%, other operating costs 16.5%, administration 6.7% and fuel about 6%.

Berthing sits inside the operating line and it is small. A broker's 2026 cost guide puts berthing for a 50m yacht at US$150,000 to 350,000 a year, against total running costs of US$2.3m to 4.1m: roughly 6 to 9%. Most of a yacht's money goes on crew, parts and yard time.

New Zealand measured where that money lands. In the 2023/24 season, 56 visiting superyachts contributed NZ$212m to the economy, about NZ$3.8m each. Some NZ$190m, 90% of the total, went to the marine industry, mostly refit and services. Spending ashore by owners, guests and crew came to NZ$22m.

> *The marina brings the yacht in. In New Zealand, most of what it then spent went to the marine industry.*

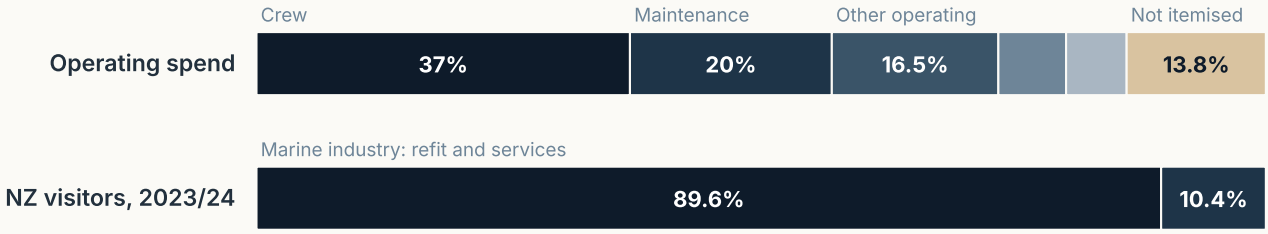

WHO EARNS WHAT

Average revenue per berth is about 10,000 a year in three very different markets. At Port Vell, each berth supports over €1m of GDP.

EXHIBIT 8

Where a superyacht's money goes

Share of annual operating spend (global, 2022) and of visiting-superyacht spend in New Zealand (2023/24)

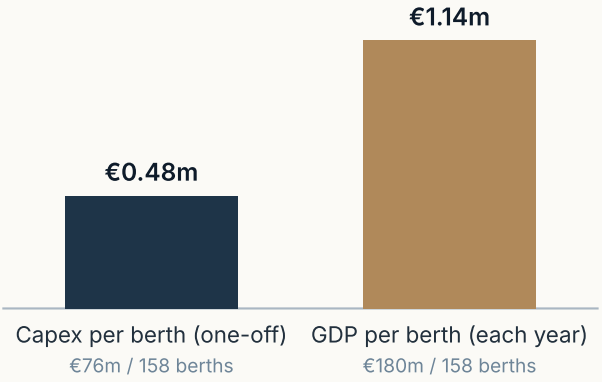

Source: Deloitte and Vrije Universiteit Amsterdam for SYBAss (Nov 2025), as reported by PressMare; NZ Marine and Market Economics (2024), via MySailing. The study does not itemise berthing; we assume it sits within other operating costs.

EXHIBIT 9

One Barcelona berth adds twice its build cost to the city every year

Marina Port Vell: rebuild cost and contribution to GDP, per berth

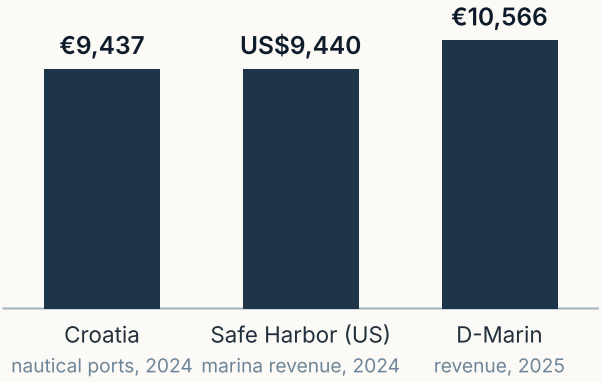

Source: Salamanca Group case study (€76m, 2013-17); Marina Port Vell operator estimate (GDP €180m, 2019; 3.1 jobs per berth). **Heirstone analysis.**

EXHIBIT 10

Revenue per berth converges at about 9,400 to 10,600 a year

Annual revenue divided by berths or storage spaces

Source: Croatian Bureau of Statistics (2024: €180m, 19,073 moorings); Sun Communities FY2024 (US$460.3m, 48,760 slips and spaces); Paperjam (D-Marin €151.1m) and CVC (14,300 berths). Bases differ: Croatia excludes 7,050 dry-storage places; D-Marin revenue includes boatyards. **Heirstone analysis.**

The three figures in Exhibit 10 are close. A Croatian nautical port, a US marina network weighted to Florida and a Mediterranean premium operator all earn roughly the same per berth on average. The averages hide the distribution: a few large berths earn far more than the rest. Marina Port Vell's figures show the other side. Each of its berths cost about €0.48m to rebuild and supports over €1m of the city's GDP every year. On these figures, a superyacht marina's contribution to the local economy can far exceed its own berth revenue, which gives governments as well as developers a reason to back one.

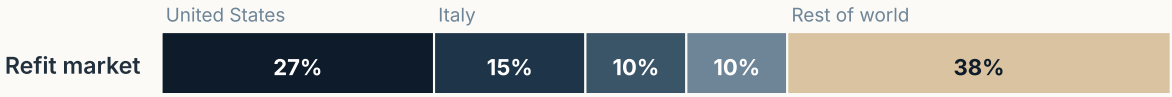

REFIT

Refit is where a yacht's money is spent, and the Gulf's new dedicated superyacht centre stops at 60 metres

EXHIBIT 11

Four countries hold about 62% of the superyacht refit market

Share of superyacht refit activity by country, 2022

Source: The Superyacht Group (YARE 2022), via Superyacht24.

Shipyard refit for superyachts generated about €2.3bn of direct turnover in 2022, and €5.6bn of total refit and maintenance impact once the wider supply chain is counted. The work is concentrated. The United States holds 27% of the global refit market, Italy 15%, and Türkiye and Spain 10% each. Italy's refit, repair and storage sector turned over more than €495m in 2023, up 17.8% in a year, with foreign-flagged yachts growing faster than domestic ones.

Capacity is tight. The Superyacht Group forecast 4,376 refit interventions in 2025, most of them on yachts of 30 to 60 metres. SuperyachtNews estimates the fleet could add about 1,200 yachts needing maintenance by 2030, more than quality refit capacity can absorb.

The region is starting from a narrow base. Gulf Craft's Ajman Superyacht Service Centre, which entered operation in 2026, has a 600-tonne hoist and handles yachts up to 60 metres, eight at a time. MB92 Group agreed in 2022 with Al Seer Marine and P&O Marinas to build a refit yard in Dubai. In Jeddah, SELA and ICON Saudi have signed a memorandum for a luxury yacht maintenance facility. Meanwhile the marinas being built around these yards advertise berths for yachts of 120 to 180 metres.

A 100m yacht that winters in the Red Sea and refits in Barcelona or La Ciotat carries most of its annual spend with it. The yard decides whether a marina is a stop or a base.

€2.3bn

direct superyacht refit turnover at shipyards, 2022

04

Marinas have become infrastructure

EXHIBIT 12

Value per marina doubled in five years

Enterprise value divided by marinas owned

Source: As Exhibit 13. **Heirstone analysis.**

Ten years ago marinas were a fragmented leisure business. They now change hands between infrastructure and private equity investors at 15 to 21 times earnings.

Safe Harbor Marinas is the clearest case. Sun Communities bought it in 2020 for about US$2.11bn, with 101 marinas. In 2025 Sun sold it to Blackstone Infrastructure for US$5.65bn, which Sun put at about 21 times estimated 2024 funds from operations. On 2024 marina net operating income of US$290m, the price is about 19.5 times NOI. Value per marina roughly doubled in five years.

In Europe, CVC agreed in July 2026 to sell D-Marin to InfraVia for a reported €1bn-plus, at about 15 times EBITDA. D-Marin runs 28 marinas with over 14,300 berths and reports 95% occupancy; according to Paperjam, mooring fees were two thirds of its 2025 revenue.

Buyers are paying for scarcity that has been permitted and is hard to replicate: sheltered water, breakwaters and the consents to use them. MarineMax paid about the same per marina for IGY in 2022 as Sun had paid for Safe Harbor, although IGY was loss-making and its assets were on the books at less than half the price. It was buying superyacht locations and owner relationships.

THE CAPITAL MARKETS VIEW

Operating platforms now sell at 15 to 21 times earnings. The region's new marinas can be designed for that exit.

EXHIBIT 13

Marina transactions, 2014 to 2026

Selected deals with disclosed or reported prices

ASSET	YEAR	BUYER	PRICE	SCALE	IMPLIED METRICS (HEIRSTONE ANALYSIS UNLESS STATED)
Safe Harbor Marinas (US)	2020	Sun Communities	US$2.11bn	101 marinas owned	c.US$21m per marina
Safe Harbor Marinas (US)	2025	Blackstone Infrastructure	US$5.65bn	138 marinas; 48,760 slips and spaces	21× 2024 FFO (seller); c.19.5x NOI; c.US$116k per slip; c.US$41m per marina
IGY Marinas	2022	MarineMax	US$480m + up to US$100m	23 marinas; loss-making; US$219m assets	c.US$21m per marina before earn-out
D-Marin (Med and UAE)	2026 (agreed)	InfraVia	over €1bn (reported)	28 marinas; 14,300+ berths; 1,000+ superyacht	c.15x EBITDA of c.€70m (reported); c.€70k per berth
Kalamış-Fenerbahçe, Istanbul	2014	Setur (Koç)	US$664m bid	30-year rights; 1,291 berths	c.US$514k per berth for 30 years of operation
Porto Montenegro	2016	Investment Corp. of Dubai	c.€200m (reported)	450 berths + consent for 400 + 280,000 sqm	In our view, development rights were the main asset
Suntex (US), minority stake	2025	Marketed by Centerbridge	c.US$4bn valuation sought	US marina platform	Stake marketed; no completed sale reported
Marina Port Vell (52%)	2026	Mirazur Capital	undisclosed	Barcelona superyacht marina	Seller QInvest; €20m+ invested since 2021

Source: Sun Communities (8-K Sep 2020; press release 24 Feb 2025; 10-K FY2024; FY2024 results); Blackstone (30 Apr 2025); MarineMax (8-K/A 2022); CVC (6 Jul 2026); SuperyachtNews (7 Jul 2026); Paperjam (2026); Hürriyet Daily News (23 May 2014); SeeNews and SuperyachtNews (2016); Bloomberg Government citing FT (18 Sep 2025); YachtBuyer (Jul 2026). Reported prices are not confirmed by the parties.

Three patterns run through the table. Prices per marina have risen sharply as financial buyers compete for a small number of permitted assets. Revenue is rent-like: mooring fees make up two thirds of D-Marin's revenue, and Safe Harbor's 2024 NOI was about 63% of its marina revenue. And some deals have been for development rights as much as for berths, as at Porto Montenegro.

A marina built today by a master developer or a sovereign fund can, once it has a track record, be sold to the same buyers as an operating platform. Gulf and Red Sea owners have mostly treated marinas as amenities for land sales. The capital markets suggest they are also assets in their own right, and Egypt has begun to run them that way: the Galala marina is on a 15-year concession with a revenue share and a target of at least 10% annual growth in visitors.

That exit has to be designed in from the start: separable title or a concession that outlasts the buyer's hold, audited berth-level revenue, a published tariff, and an operator agreement that can be transferred. On published information, none of the Gulf marinas we benchmarked would yet pass the tariff test.

US$116k

price per slip or storage space paid for Safe Harbor (2025)

c.€70k

price per berth implied by the D-Marin sale (2026)

63%

Safe Harbor marina NOI as a share of marina revenue, including transient (2024)

CHAPTER 5

05

The land pays for the water

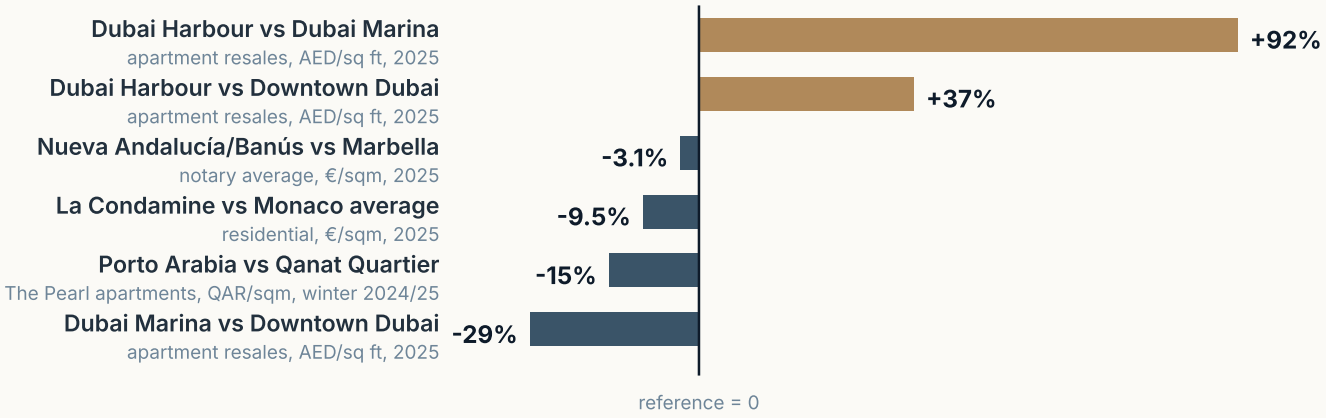

Waterfront property commands a premium, and that much is well documented. Knight Frank found prime waterfront homes 40% dearer than comparable inland homes worldwide, with harbourside the highest premium at 59%. In the UK, a private mooring added about 121% to prime waterfront values in 2018, more than a harbour view.

EXHIBIT 14

Four mature marina districts trade below their city's best address; Dubai Harbour trades well above it

121%

premium a private mooring added to prime UK waterfront homes, against up to 107% for a harbourside position (Knight Frank, 2018)

THE FRONTLINE EFFECT

In Dubai, the premium sits in new deep-water schemes with a beach and a hotel

At district level the evidence is weaker. In four mature marina districts we compared, prices sit below the city's prime reference. Dubai Marina apartments resold at an average AED 1,966 per sq ft in 2025, 29% below Downtown. Porto Arabia, The Pearl's marina district, trades 15% below Qanat Quartier on the same island. La Condamine, around Port Hercule, sits 9.5% below Monaco's average, and Nueva Andalucía and Puerto Banús 3% below Marbella's.

These districts are older and denser, and for most residents the marina is a view rather than a mooring.

In Dubai, the premium appears where the water is new, deep and paired with beach and hotels, although newer stock explains part of the gap. Dubai Harbour, with berths for yachts up to 160 metres, resold at AED 3,773 per sq ft in 2025, 92% above Dubai Marina and 37% above Downtown. A residence at Bulgari Resort on Jumeira Bay, with its own 50-boat harbour, sold for AED 13,543 per sq ft in February 2023, a Dubai record at the time. Waterfront communities accounted for over half of Dubai home sales above US$10m in 2025.

In the region's resort towns the land carries the economics. Orascom Development sold a 145,000 sqm plot in El Gouna in 2024 for 15.7 times its book value. El Gouna's revenue rose 32.8% to EGP 19.8bn in 2025: net real estate sales reached about EGP 12bn, 39% of them international, average selling prices rose 30%, and recurring revenue from commercial assets rose 37% to EGP 9.5bn. Marassi Red Sea, planned around three marinas, had pre-sold more than EGP 80bn in its first phase by September 2026.

Porto Montenegro shows the sequence. When the Investment Corporation of Dubai bought it in 2016, for a reported €200m, it acquired 450 berths together with consent for 400 more and 280,000 sqm of building rights. In our view the development rights were the main asset, and the marina was what made them valuable.

AED 13,543

per sq ft, a Dubai record when sold (Feb 2023), at Bulgari Jumeira Bay with its own harbour

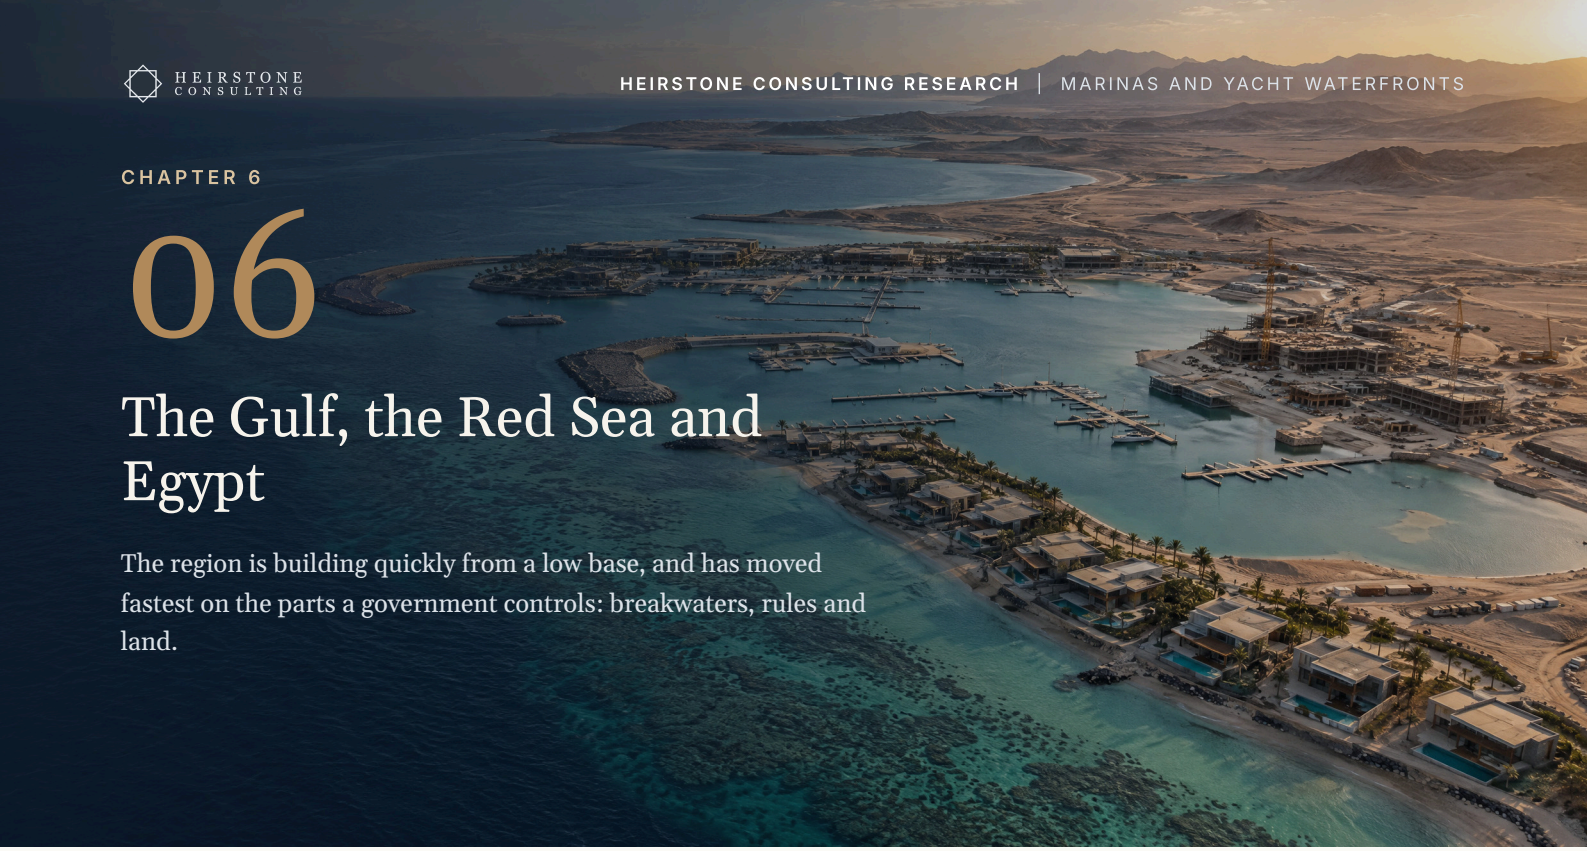

15.7x

book value achieved on a 145,000 sqm El Gouna land sale (2024)

EGP 80bn+

> *Design the masterplan so that the most valuable plots touch deep water, and price the berth as the amenity that makes them so.*

CHAPTER 6

06

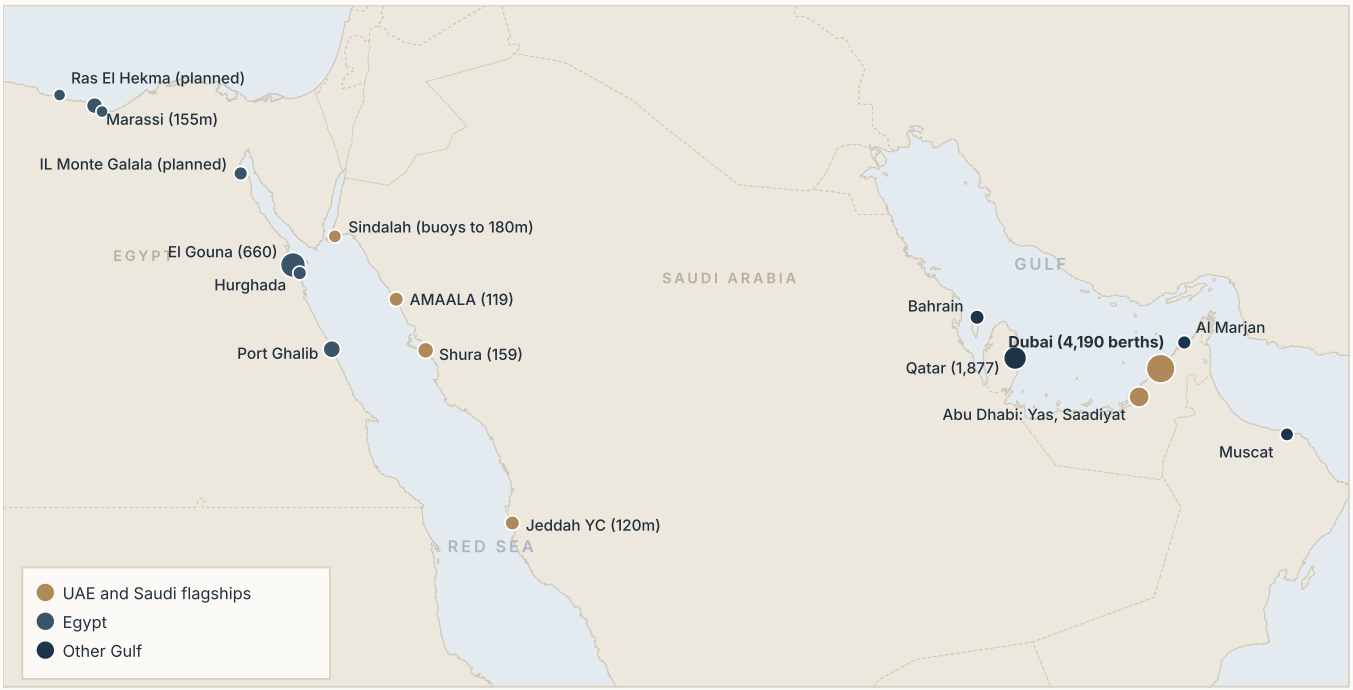

The Gulf, the Red Sea and Egypt

The region is building quickly from a low base, and has moved fastest on the parts a government controls: breakwaters, rules and land.

EXHIBIT 16

Where the region is building

Selected operating and planned marinas; berths where published

Source: Heirstone Marina Benchmark 2026; Dubai Maritime Authority (H1 2025); Gulf Times (2024); Arab News (2026); IGY Marinas (2023); Business Wire (2025); Maritime Observer; ADQ (2024); El Gouna; Invest-Gate. Positions of planned schemes approximate.

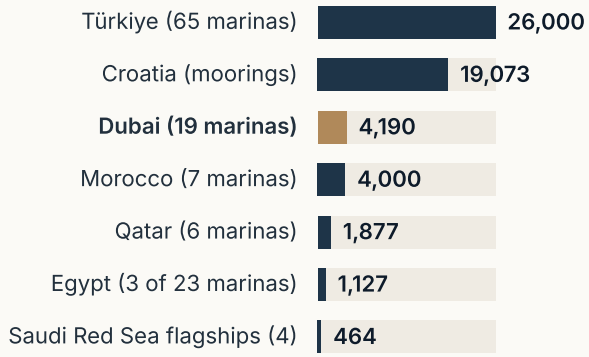

SUPPLY AND DEMAND

Dubai is the only market we found in the region that publishes a time series. Visiting yachts are rising quickly from a small base; berth stock is flat.

EXHIBIT 17

Berth stock: the region against its neighbours

Yacht berths by market, latest published year

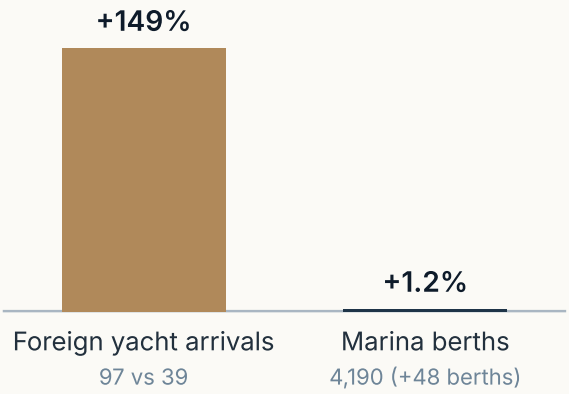

Source: Turkish Ministry of Transport via NTV and Yeni Birlik (2024-25); Croatian Bureau of Statistics (2024); Dubai Maritime Authority (H1 2025); Le360 (c.2017); Gulf Times (2024); Arab News and Dockwalk (Saudi: Jeddah 100, Sindalah 86, AMAALA 119, Shura 159); El Gouna, Invest-Gate and SuperyachtNews (Egypt: El Gouna 660, Marassi 267, Hurghada Marina 200, of 23 tourist marinas per Al-Manassa citing the Ministry of Transport, 2025). Egypt and Saudi totals are **Heirstone analysis**.

EXHIBIT 18

Dubai, first half of 2025

Change on first half of 2024

Source: Dubai Maritime Authority, H1 2025, via Maritime Observer.

Foreign-flagged yacht arrivals in Dubai rose 149% in the first half of 2025, to 97, while berths rose 1.2%. Dubai Harbour reported 91% occupancy for visiting vessels in 2024 (Gulf News). The base is still small: 89 foreign yacht visits in all of 2024, against 7,738 registered marine vessels. Residents fill Dubai's marinas; the growth is coming from visitors.

The neighbour to watch is Türkiye. It has tripled its yacht berths since 2002, to about 26,000 across 65 marinas in 2025, and plans 29,029. That is six times Dubai's stock and, on the figures we could find, more than every Gulf state combined. Türkiye also holds 10% of the global refit market. It is a summer destination with a winter refit industry, which is the combination the Gulf and Red Sea are trying to build in reverse.

Saudi Arabia's four flagship Red Sea marinas offer about 464 berths. Qatar reports 1,877 across six marinas; Old Doha Port welcomed around 20 superyachts during the 2022 World Cup. Egypt has 23 tourist marinas, 14 on the Red Sea and 9 on the Mediterranean. The three in our benchmark with operator berth counts, El Gouna, Marassi and Hurghada Marina, hold 1,127 berths between them, and Port Ghalib alone has capacity for up to 1,000 yachts.

26,000

yacht berths in Türkiye in 2025, up from 8,500 in 2002

c.20

superyachts welcomed at Old Doha Port during the 2022 FIFA World Cup

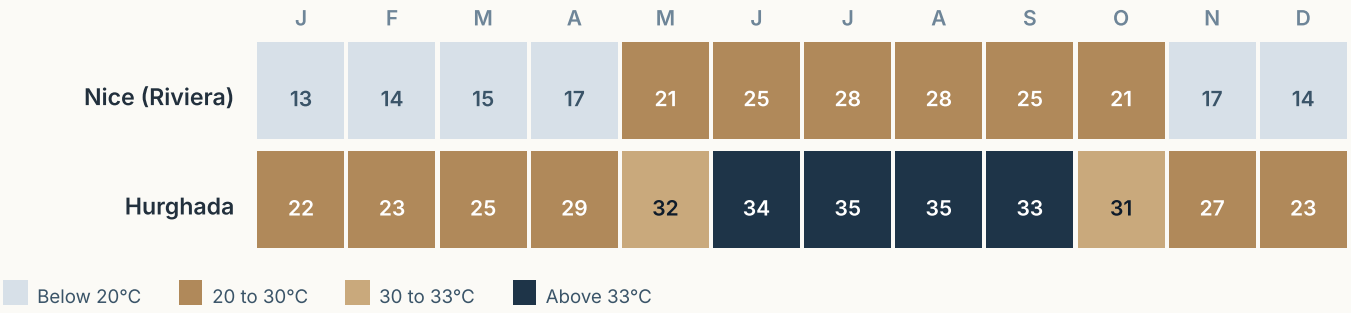

SEASON

The region competes with the Caribbean for the winter, not with the Mediterranean for the summer

EXHIBIT 19

Two cruising calendars of equal length

Mean daily maximum air temperature by month, °C: Nice 1991-2020, Hurghada 1981-2010

Source: Météo-France, Fiche climatologique Nice (06088001), 1991-2020; Egyptian Meteorological Authority, Hurghada normals 1981-2010, via the WMO World Weather Information Service; accessed 2026. Comfort band is a **Heirstone assumption**.

Climate sets the calendar. Taking a daily maximum of 20 to 30°C as comfortable cruising weather, the Riviera's season runs from May to October. On the Egyptian Red Sea, Hurghada's runs for six months, from November to April, as long as the Riviera's summer, and its July and August days average about 35°C.

Saudi Arabia markets its coast as the winter extension of the Mediterranean season. That is the right pitch, and it means a berth here can sit empty through the hot months unless a resident fleet, dry storage, refit or events fill it. Business plans that assume year-round visiting occupancy are wrong by design.

The calendars are also complementary. A yacht can spend May to October on the Riviera, cross through the Suez Canal and spend November to April on the Red Sea. The marinas that capture that rotation will be the ones that make the crossing and the paperwork easy, and that can do the yacht's winter refit.

35°C

Hurghada's mean daily maximum in July and August (1981-2010)

6 months

Hurghada's comfortable cruising season, November to April, as long as the Riviera's May to October (Heirstone analysis)

RULES

Regulation has moved faster than berths

Since 2023, Saudi Arabia, Egypt and Bahrain have rewritten how yachts enter, stay and charter. For a captain choosing a winter base, the paperwork matters as much as the quay.

EXHIBIT 20

The rules have changed quickly

Selected yacht regulation and market milestones, 2023 to 2027

Jul 2023	Egypt	Digital yacht window cuts permit processing from 30 days to under 30 minutes
Feb 2024	Saudi Arabia	Cruise ships and yachts allowed temporary entry of 180 days, extendable
2024	Egypt	47 islands authorised as alternative ports for yachts
Sep 2024	Saudi Arabia	First yacht regulations: technical and charter licences, SAR 4,000 for six months
Nov 2024	Egypt	Suez Canal discounts: 20% on return transits for smaller yachts, 50% on Port Said and Suez marina mooring
Apr 2025	Bahrain	Foreign leisure vessels may obtain navigation permits without a local agent
May 2025	Egypt	Waters opened to foreign-flagged commercial charter yachts
Winter 2026	Saudi Arabia	Red Sea Global links AMAALA and Shura marinas under one berthing agreement
Oct 2027	Saudi Arabia	First Red Sea Yacht Show at Jeddah Yacht Club

Source: Cruise Arabia (Feb 2024); Al-Manassa citing Egypt Ministry of Transport (May 2025); SuperyachtNews (Sep 2024; 2024); Bahrain Ministry of Transportation and Telecommunications (Apr 2025); YachtCharterFleet (May 2025); Arab News (2026); Saudi Tourism Authority (Sep 2026).

Saudi Arabia built the rulebook before the traffic. The Saudi Red Sea Authority issued four infrastructure codes for marina and cruise terminal planning and operation in 2024, along with its first yacht regulations, and issued 28 coastal tourism licences that year, nine of them to marina operators. It publishes licences and compliance visits; we found no published yacht-arrival figures. Egypt has moved on four fronts in two years, from digital permits to opening its waters to foreign charter yachts. Bahrain removed the requirement for a local agent for foreign leisure vessels.

180 days

temporary entry for yachts in Saudi Arabia, extendable by a similar period (2024)

SAR 4,000

Saudi technical or charter licence for a yacht, for six months (2024)

28

coastal tourism licences issued by the Saudi Red Sea Authority in 2024, nine to marina operators

47

islands authorised by Egypt as alternative ports for yachts (2024)

EGYPT

Egypt has 23 tourist marinas on two seas, new rules and new operators.

Egypt's position is distinctive. A yacht can spend the summer on the Mediterranean coast, transit the Suez Canal and winter on the Red Sea without leaving the country. Few markets in the region make that rotation as simple.

The infrastructure is already there in quantity. Egypt has 23 tourist marinas. On the Red Sea, El Gouna's three marinas have 660 berths for yachts up to 70 metres, Port Ghalib has operated since 2002, and Hurghada Marina, run by Camper & Nicholsons, has 200 berths for yachts of 10 to 80 metres. On the Mediterranean, Marassi Marina opened in 2021 with berths for 267 yachts up to 155 metres, the largest capability on the North Coast that we could verify.

The rules have changed fast. A digital window introduced in July 2023 cut permit processing from 30 days to under 30 minutes. In 2024, 47 islands were authorised as alternative ports for yachts. From November 2024 the Suez Canal Authority discounted return transits for smaller yachts and mooring at its own marinas. In May 2025 Egypt opened its waters to foreign-flagged commercial charter yachts.

The state is now turning to operations. The Galala marina went to Nautix on a renewable 15-year concession, with a 60/40 revenue split in the Ministry of Transport's favour after the first two years and a target of at least 10% annual growth in visitors. Private developers are adding capacity: IL Monte Galala at Ain Sokhna plans 150 or more berths for about US$44m, around US$290,000 per berth, with IGY Marinas appointed as operator and construction from the second half of 2026. Ras El Hekma, where an ADQ-led consortium paid US$24bn for development rights, includes yacht marinas in its plans.

Egypt also has a home fleet and a public price. Enterprise reported about 1,000 luxury yachts flying the Egyptian flag in 2022, a resident base for the hot months, and national docking fees were set that year at US$4 to 14 per metre a day, depending on yacht length. The natural next step is a national berth total and visiting-yacht statistics, which would let investors size the market as clearly as they can price it.

23
tourist marinas: 14 on the Red Sea, 9 on the Mediterranean (2025)

CHAPTER 7

07

Ten rules for a marina-led waterfront

These are the tests we would apply to any marina-led masterplan in the Gulf, the Red Sea or on Egypt's coasts, whether we were advising the landowner, the developer or the lender.

Most are cheap to get right at the planning stage and very expensive to fix once the breakwater is in the water.

1 **Start with the yacht, not the basin**
Size the deep-water quay for the 60m-plus yachts in the order book. Small berths are rarely scarce; a handful of large ones decide the marina's value.

2 **Sell time as well as nights**
Long-lease rights on large berths, such as the €3.5m asked for five years at Antibes, can fund marine works early and lock in a resident fleet.

3 **Plan the yard alongside the first superyacht berths**
In New Zealand, 90% of visiting-yacht spend went to the marine industry, mostly refit and services. Plan a lift, sheds and hardstanding for the 60m-plus yachts you are courting, or partner a Mediterranean yard group.

4 **Publish a tariff**
Captains and future buyers both need a price. Egypt set national docking fees in 2022; every marina should add its own published superyacht tariff.

5 **Put the premium on the water's edge**
In the districts we compared, the marina premium sat on new deep-water frontage with beach and hotel, not across the district. The most valuable plots should touch the quay.

6 **Separate the operating company from day one**
Platforms have sold at 15 to 21 times earnings. Title, concession term, accounts and operator contract should allow the marina to be sold without the town.

7 **Plan for a hot summer**
Fill May to September with the resident fleet, dry storage, refit slots and events. Visiting occupancy will not do it.

8 **Treat the rulebook as part of the product**
Entry, charter licensing, crew visas, fuel duty and cruising permits decide where a captain winters. Egypt cut permit processing from 30 days to under 30 minutes.

9 **Phase on evidence**
Cape Town committed to eight superyacht berths after 35 superyacht visits in a season. Get the breakwater right first, then add pontoons as demand appears.

10 **Price the physical risk**
Marinas sit on the most exposed land in any scheme. Hurricane Irma damaged about 50,000 boats in Florida and destroyed two marinas on Saint Martin. In the Gulf and Red Sea the design cases are different, but sea level and extreme weather still belong in the model and the insurance.

IMPLICATIONS

What to do with this

The region has done the hard civil engineering. The next decade will reward those who build the business around it: the yard, the price list, the resident fleet and the land plan that puts value next to deep water.

FOR

Governments and land agencies

Measure what matters: publish berth stock, visiting yachts and refit activity every year.

Judge a marina by the refit, crew and events business it supports. Port Vell estimates it supports over €1m of GDP per berth a year (2019).

Concession operations with growth targets, as Egypt has begun to do, and keep the rules simple for arriving captains.

Back refit capacity for 60m-plus yachts; it is the multiplier the region lacks.

FOR

Master developers

Put deep-water berths in front of the highest-value plots; avoid building a marina district that is mostly a view.

Sell long-lease rights on large berths to fund the marine works.

Plan the summer: storage, refit and events for the hot months.

Keep the marina's title, accounts and operator contract separable for a later sale.

FOR

Investors and lenders

Underwrite the large berths and the yard, not the average berth: average revenue per berth is about 10,000 a year in the markets we compared.

Expect the land, not the berths, to carry returns in resort schemes.

Price the exit: marina platforms have sold at 15 to 21 times earnings.

Ask for evidence of demand by yacht length and season, not total berths.

How Heirstone works on marinas and waterfronts

We help landowners, developers and investors decide what to build on the water and what it is worth: demand and market studies by yacht size and season, highest-and-best-use and site selection, feasibility and business models (DCF, IRR, NPV and Monte Carlo testing), masterplanning and phasing strategy, destination and economic-impact studies, and benchmarking of the kind in this report.

NOTES, SOURCES AND DEFINITIONS

Notes

Definitions

Superyacht: a yacht of 30 metres or more unless stated (some sources use 24 metres). **Max LOA:** length overall of the largest yacht a marina states it can berth. **Berths:** wet berths as published by the operator; dry storage is excluded unless stated. **NOI:** net operating income. **FFO:** funds from operations. **EBITDA:** earnings before interest, tax, depreciation and amortisation.

Method

Figures are as published by the sources listed, in the currency and period stated. We have not converted currencies. Where we derive a figure (per berth, per marina, per day, percentage differences) it is labelled Heirstone analysis and uses only the published inputs shown with it. Asking prices for berths are not transaction prices. Several sources disagree on berth counts; we use operator figures and show alternatives in the benchmark. The Gulf and Red Sea marinas planned or opened since 2024 are changing quickly and their figures should be read as of 2026.

Use of this report

This report is published for general information. It is not investment, legal or valuation advice and should not be relied on as such. Images are illustrative and do not depict specific marinas. © Heirstone Consulting L.L.C-FZ, 2026.
